Amyloid Stain Kit (Congo Red)

Description: The Amyloid Stain Kit (Congo Red) is intended for use in the histological visualization of amyloid in

tissue sections. Examination under a polarizing microscope results in green birefringence of amyloid.

Red to Pink Amvloid: Erythrocytes: **Light Orange** Eosinophil Granules: Orange to Red

Nuclei: Blue

Uses/Limitations: Not to be taken internally.

> For In-Vitro Diagnostic use only. Histological applications. Do not use past expiration date.

Use caution when handling these reagents.

Non-Sterile.

Control Tissue: Freshly cut sections containing amyloid.

Cut sections 6-12 microns to show smaller amyloid deposits.
